Golden Predator Common Stock to Begin Trading on OTCQX

Vancouver, BC, September 26th, 2016: Golden Predator Mining Corp. (TSX.V: GPY) (the “Company”) is pleased to announce that its common shares will be eligible for trading on OTCQX under the symbol “NTGSF”, effective with the open of business on Monday, September 26th, 2016. The Company’s common shares will continue to trade on the TSX Venture Exchange under the Company’s current symbol “GPY.”

OTCQX is the premier market for U.S. over-the-counter securities and offers transparent and efficient trading of established U.S. and global companies. To qualify for the OTCQX market, companies must meet financial standards, demonstrate compliance with applicable U.S. securities laws and be sponsored by a professional third-party advisor.

"In response to growing investor interest we have chosen to have Golden Predator’s shares traded on both the TSX Venture Exchange and OTCQX, enabling greater exposure and accessibility to our expanding U.S. and global shareholder base," said Janet Lee-Sheriff, Chief Executive Officer of Golden Predator. “Golden Predator looks forward to broadening its shareholder base further through the OTCQX platform.”

About OTC Markets Group, Inc.

OTC Markets Group Inc. (OTCQX:OTCM) operates the OTCQX Best Market, the OTCQB Venture Market and the Pink Open Market for approximately 10,000 U.S. and global securities. Through OTC Link ATS, it connects a diverse network of broker-dealers that provide liquidity and execution services. It enables investors to easily trade through the broker of their choice and empowers companies to improve the quality of information available for investors.

About Golden Predator Mining Corp.

Golden Predator Mining Corp., a Canadian gold mineral exploration company, is focused on advancing its high grade 3 Aces Project in Canada’s Yukon. The 3 Aces property is a 225 km² property consisting of 1,118 contiguous quartz claims (23,000 hectares) located in southeast Yukon. The veins discovered to date are characterized by coarse visible gold with a low sulphide content consistent with an orogenic vein model.
